

Ranveer Singh

DevOps Engineer with 3+ years of experience designing secure CI/CD pipelines, automating cloud infrastructure on AWS and Azure, and integrating SAST, DAST, and SCA tools into enterprise-scale deployments. Strong expertise in Kubernetes, Docker, Terraform, IAM governance, and compliance-driven DevSecOps practices in banking and finance domains.

Certifications

- Scrum master
- AZ-900 fundamentals

Technical Skills

- DevOps & DevSecOps: CI/CD, Shift-Left Security, SAST, DAST, SCA, Vulnerability Management
- Cloud: Microsoft Azure, AWS
- Containers & Orchestration: Docker, Kubernetes (AKS)
- Infrastructure as Code: Terraform, ARM Templates
- Configuration Management: Ansible
- Monitoring & SIEM: Prometheus, Grafana, ELK, CloudWatch, Azure Monitor, Log Analytics, MS Defender, Azure Sentinel
- Security Tools: SonarQube, Snyk, Checkmarx, OWASP Dependency-Check
- Scripting & Version Control: Python, Bash, Git
- IAM Tools: RBAC, SoD, One Identity, ServiceNow
- Database: PostgreSQL, MySQL, MongoDB

2024–
Present

Associate

Cognizant | Netherlands, Pune

- Designed and maintained automated CI/CD pipelines using Azure DevOps, GitHub to enable secure repeatable and reliable deployments across environments.
- Managed AWS infrastructure (EC2, S3, IAM, VPC, Lambda) supporting production workloads with secure configuration and cost optimization controls.
- Containerized applications using Docker, creating optimized images and multi-stage builds to reduce image size and improve deployment speed.
- Developed Infrastructure as Code (IaC) with Terraform and ARM templates, enforcing secure configurations and secrets management through Azure Key Vault integration
- Implemented zero-downtime rolling updates for production Kubernetes workloads, maintaining high availability and deployment reliability in a DevOps pipeline.
- Reduced testing time by 50% through CI/CD automation designed and implemented secure CI/CD pipelines using Azure DevOps, integrating SAST (SonarQube) and SCA (Snyk) tools to automate vulnerability detection and remediation.
- Applied IAM governance principles including RBAC, SoD, and least-privilege access using One Identity
- Conducted application load testing and system performance validation to ensure reliability and compliance with security SLAs.
- Recreated and supported RCEC (External Connection certificate)
- Implemented security releases/Non-Personal Account (NPA) password rotations as part of compliance and security hardening activities.
- Aided DevOps governance controls across IAM, ITSCM, BIA, IT Risk Foundation, Change Management, Security Detection & Response, Platform Security, and Vulnerability Management.
- Performed PeopleSoft administration activities, including server startup/shutdown, configuration changes, and cache clearing in production and non-production environments
- Assisted with SIEM integrations using Microsoft Defender and Azure Sentinel for centralized security event analysis.
- Assisted audit, IT Risk and compliance controls across IAM, Change Management, Vulnerability Management, Platform Security.

Education

Bachelor Of Engineering Electronics & Telecommunications

Priyadarshini College Of Engineering,
Nagpur University

2016- 2020

DOMAINS

- Banking
- Finance

HOBBIES

- Calisthenics
- Playing badminton and chess, cricket
- Travelling

2023-
2024

Programmer Analyst

Cognizant | Netherlands

- Directed IT Risk Management Process (ITRMP) for applications, ensuring alignment with risk frameworks and supporting applications until full ITRMP compliance was achieved.
- Tracked and carried out compliance-driven tasks and control activities, ensuring timely closure of risk and audit findings.
- Documented for applications, identifying critical processes, recovery objectives, and business risks.
- Processed and resolved ServiceNow IAM requests, maintaining governance components such as DQI and CMDB with high data accuracy
- Onboarded users and created entitlements and Non-Personal Accounts (NPAs) on internal entitlement management tool.
- Developed and maintained Business Impact Analysis (BIA) documentation for applications, identifying critical processes, recovery objectives, and business risks.
- Applied IAM governance principles (SoD, RBAC, least privilege) using One Identity.
- Collaborated with application owners and IAM teams during migration / parallel support from One Identity.

2022-
2023

Programmer Analyst Trainee

Cognizant | Pune

- Owned and coordinated application go-live readiness activities, ensuring completion of required risk, security, and compliance controls prior to production deployment.
- Coordinated and scheduled application penetration testing, tracking remediation activities and ensuring closure of identified vulnerabilities
- Ensured compliance of key control domains including FOC, Change Management (CHM), IAM, and Security Detection & Response (SDR).
- Collaborated with application owners, security teams, and risk stakeholders to maintain audit readiness and regulatory compliance.
